

Lab 6

HTML5 for Beginning Beginners

Andrew Snyder-Spak

LearnToProgram.TV

For this lab you will be creating a simple website with a table that lists 4 of your friend's names, ages, and the number of years that you have known each other. The table you will be creating should have a total of 5 rows and 3 columns. The top row should contain 3 table headers that label each column. The columns will be "Friend's name:", "Age:", and "# of years we have known each other:". The following 4 rows will be filled in with the corresponding information for 4 of your friends (real or imaginary). If you have any issues, feel free to go back and rewatch the video lectures. Your finished lab should look something like the screenshot below:
